

# CARE INSTRUCTIONS

With proper care, you'll have a longer of your jewelry.

If you take care of these points here, then you will enjoy the longevity of your jewelry. When you still have more questions or you want to send us something back for repair, just feel free to contact us.

## General information

Please remember, that all the flowers and plants we used are all planted, pick and prepared by ourself.

Therefore these are real plants, so accordingly you need to take good care of them. Always remember that dried plants need very less of sunbeams ( Sun baths are unwelcome ), but they need a lot more shadow.

The jewelry must be protected against overheating and cold, otherwise the colors of the plants or flowers may fade with time.

One of the most important thing is, that the jewelry shouldn't expose to water or many air humidity.

The inner life of the glass ball don't wither and will stay the same as you got it, when you protect it from water, too many sunbeams & air humidity.

**- You won't get warranty for these things. -**

## STORAGE

Please storage your jewelry in a dry environment, because if the air humidity can cause of fading, discolouration or the flowers could paste together.

The jewelry storage should be protected from light and should have a soft dry pad - ideally each in his own jewelry box, which will not in the bathroom.

## SILVER JEWELRY

Silver & Silver jewelry will tarnishing by time & nobody can change that. This is not a (product) defect, but a known proterty of this metal, when it come in contact with water/air the silver will oxidized to silver sulfide. This is why you need to clean it regulary - especially if you didn't wear it often. You can use a household usual silver cleaning cloth.

Silver should best be stored on a cotton cloth - felt or leather isn't recommended as the base, because it will compounds secrete sulfur, which cause the tarnishing on the silver.

## GLASS BALL

Mainly our jewelry are made with glass balls, which is mouthblown.

They are very stable at normal use, but never forget that it's still glass, so if you throw it on the floor it will also break. **The Glass balls are all 100 % Glass & not plastic balls!**

## CONCRETE

Mainly concrete is used for high-rise construction. It's very hard but still destructible.

So please don't drop or hit it against the wall, floor or anything else.

One of the most important thing here is, don't go to take a bath or shower with the jewelry, because to much water will soften the concrete.

## LEATHER

Bracelets made of leather are strongly stressed in use. The more valuable a bracelet is for you the gentler you should handle it. In constant contact with the skin, the sweat may go into the leather. So please don't wear the leather bracelets, when you are doing some sweaty activity even at night when you sleep, you should take it off. Shower, swimming or in the heavy rain is not recommended. When too much moisture comes into the leather fiber, the leather could swell.

## OTHERS

Like other precious objects consume jewelrys faster, if it's constant in use.

Personalized Products are specially made for you, therefore we can't take these products back. Unless there is a manufacturing defect.
